

After Action Review with precise omnipresent view for Military Operations in Urban Terrain Training Facility

The Background:

McKenna Range is a Military Operations in Urban Terrain (MOUT) training facility in Fort Benning, GA. The range looks like an “urban village” complete with its own buildings, airfield and tunnels. It is used to train military and law-enforcement personnel to operate in an urban environment.

The Challenge:

Dramatically improve the effectiveness of after action reviews of military training vignettes in order to drive combat performance to the highest possible level.

The InfoValue Solution:

InfoValue SimulcastTV™ is a state-of-the-art system that allows trainees to review their actions with precise omnipresent views to maximize the benefits of training. With the InfoValue SimulcastTV™ system, the video signals from many cameras at geographically dispersed locations are encoded into high-quality videos, broadcast in real-time for live monitoring and simultaneously recorded for interactive, on-demand playback during after action reviews. The instant playback capability allows a training vignette to be immediately followed by interactive review of all the recorded video with precise timing synchronization.

InfoValue SimulcastTV™ features InfoValue QuickVideo™ servers, the award winning and performance leading streaming platform.

The Epilogue:

Since 1999, McKenna Range has significantly enhanced training effectiveness and efficiency while saving lives and preventing injuries.
